

Blue Link Solar Network

Blue Link Solar Network LLC was started by solar industry veterans, Talmage Solar Engineering, Inc. and Two Seas Metalworks.

Since 1975 Talmage Solar Engineering, Inc. has been designing and installing renewable energy systems for a wide range of applications. Initially serving New England's off-grid market, the company has made the transition to supplying a wide range of renewable energy products and services including grid-tied and off-grid PV systems, solar thermal systems, as well as high performance building contracting, consulting and materials.

Located in southern Maine, the company operates under the brand, Solar Market®. A recognized industry leader, in 2004 Solar Market completed a 60 kilowatt system on the Tannery Mall in Newburyport, MA- the largest private in system in the Northeast.

Two Seas Metalworks, established 1980, has been designing and manufacturing innovative mounting systems for solar equipment since 1996. The company provides solutions for residential, commercial, industrial and government applications with Universal and customized products. With vast knowledge and expertise in metalworking it has the most robust product line available in the PV realm with absolutely no failures under rated conditions!

Two Seas is the largest manufacturer of PV rack systems in the United States. Operating out of northern California, in 2004 the company supplied a solar tracking system to the largest PV installation in Europe.

These two companies joined forces to create Blue Link Solar Network LLC when they realized that together they could build a PV system that would meet the demand for affordable solar energy. Read more in the section, Why Blue Link Solar Network?
