Web-based RATS Software Courses

Estima

ARCH, GARCH, and Stochastic Volatility Models, September–November 2012

Our next web course will deal with ARCH, GARCH, and Stochastic Volatility models, and will run from September 27 to November 15 of 2012.

We'll be posting more details on the content of the course on our website in the coming weeks.

General Course Information

Our web-based "e-courses" are taught by Tom Doan, the author of the RATS software. Each course takes place in a private section of our discussion forum accessible only to registered forum participants.

Each week, we will post a new lesson in the form of a PDF document, along with any accompanying example programs, procedure files, and sample data. The course participants can then post questions which can be answered directly on the forum or handled through additional materials. This approach allows you to work through the lessons and examples on your own time and at your own pace, although we do recommend that you try to keep up with the weekly schedule.

The fee for each course is $125. You will need to have access to version 8.0 or later of RATS. You can register online via our website, or by mail or fax using this form.

Product	Quantity	Price	Total
ARCH/GARCH Course	_____	@ $125 =	_____
		Total =	_____
